Simplify your labor management and payroll processing : Get the job done in no time at all!

eTAC Terminal Specifications:

Electronic punch clock system with 7" touch monitor, biometric reader, RFID reader, access control, camera, PoE, software included for unlimited users.

What's in the kit?

eTAC terminal, BoneID Express software, PoE injector.

Free yourself with the eTAC time management system, and facilitate your payroll preparation times. Eclipse™ eTAC and BoneID Express allows you to easily adjust employee hours in case of discrepancies or when an employee entry error occurs.

The system seamlessly manages and accounts for breaks and lunch, and keeps track of unauthorized hours. The eTAC Time Management system can help you manage evening and night bonuses, as well as round entries and exits in selectable time segments (5, 10, 15 minutes or custom).

BoneID Express software exports the structured data into an Excel or CSV file for easy entry into your payroll processing system. Customized options are available to provide integration with most major payment processor services, such as Desjardins, Nethris, etc.
